

Hrvoje Pavlinovic

Senior Software Engineer - Backend / Full-stack / AI-assisted delivery

hrvoje@pavlinovic.com | +385 97 629 2514 | <https://hrvoje.pavlinovic.com> | Split, Croatia (EU)

Why NLC / Infinitas is a strong fit

Senior engineer with 13+ years of experience taking ambiguous product and platform problems from idea to production. My strongest recent work is in TypeScript/Node.js backend systems, distributed commerce workflows, PostgreSQL, AWS, GraphQL/Hasura, payments, shipping, and operational tooling. I use modern AI tooling every day, but I am careful about scoped credentials, explicit production actions, and keeping engineering judgment in the loop.

The role reads like a good match because Infinitas needs someone who can learn a complex fund-finance domain, make progress with limited supervision, and communicate trade-offs clearly. I have done similar domain-heavy work in healthcare/clinical trials, vehicle telemetry and OTA systems, ad engagement data, and live commerce/logistics.

Relevant strengths

- Independent delivery: clarify scope, find the real constraint, design the system, implement, test, debug, release, and communicate clearly.
- AI-fluent workflow: modern AI tooling, repo-specific agent guidance, connected operational context, safe credential boundaries, and CI feedback loops used to move faster without outsourcing judgment to the tool.
- Complex domain experience: live commerce, auctions, payments, shipping/logistics, healthcare/clinical trials, ad engagement data, search, real-time systems, and automotive telemetry.
- Stack adaptability: deep recent production work in TypeScript, Node.js, NestJS, Express, GraphQL, Hasura, PostgreSQL, Redis, AWS CDK/ECS/Lambda/SNS/SQS, React, Next.js, SvelteKit, and Deno/Fresh.

Professional experience

Senior Backend Engineer | Tilt | 2025 - Present

- Build backend systems for Tilt's live commerce platform across livestreaming, auctions, product inventory, payments, shipping, seller tooling, search, and real-time buyer workflows.
- Work inside a large TypeScript backend monorepo with 50+ services and shared libraries across NestJS, Express, Hasura, PostgreSQL, Redis, AWS ECS/Lambda, SNS/SQS, S3, AppConfig, Stripe, Shippo, and Sentry.
- Delivered complex operational work around Stripe, Shippo, Royal Mail, InPost, Hasura schema exposure, auction events, live rooms, product ingestion, and mobile seller flows.
- Introduced and improved AI-assisted engineering workflows, including repo-specific agent guidance, ticket-to-implementation experiments, CI feedback loops, and safer handoff patterns.

Senior Backend Engineer | ReneVerse | 2023 - 2025

- Architected backend services for an in-game advertising and gaming assets platform, including real-time ad engagement and targeting systems.
- Scaled systems to handle 1.7B+ monthly impressions at peak traffic while keeping delivery moving in a lean startup environment.
- Built AWS CDK infrastructure, GraphQL APIs, background processing, partner SDK integration support, and operational tooling.

Software Engineer (Consulting) | CryptoToday | 2024 - 2025

- Built backend and infrastructure for a market discovery product with real-time data ingestion, ranking, Telegram mini-app support, and community workflows.
- Optimized database access for price scraping from 20+ exchanges with indexing, caching, and query improvements.

Software Engineer | Povio | 2021 - 2023

- Developed clinical trials management systems for Clariness, a German healthcare company, working in a regulated and detail-heavy product domain.
- Implemented backend architecture using Node.js, NestJS, TypeORM, PostgreSQL, AWS, Terraform, Docker, and GitLab CI/CD.

Backend Engineer | Rimac Automobili | 2020 - 2021

- Contributed to telemetry APIs and OTA update systems for high-performance electric vehicles, using TypeScript, GraphQL, event-driven design, Kafka, PostgreSQL, and AWS.

Senior Software Engineer | Profico | 2018 - 2020

- Built web applications and integrations for media and real-estate clients, mentored junior developers, and helped establish development practices.

Earlier experience | Ericsson and Freelance | 2013 - 2018

- Built internal tooling, testing systems, PHP/Symfony applications, Node.js migrations, and freelance web systems while completing MSc and BSc studies.

Selected projects

- Memoato - AI-powered personal memory and life tracking platform with natural-language capture, automated categorization, searchable history, and insight dashboards.
- Personal website - public writing and project hub with lightweight traffic stats, Memoato profile integration, blog publishing, and self-hosted Fresh/Deno delivery.
- PLAYGRND - amateur football league and tournament platform with player profiles, standings, match results, and community-first local sports workflows.

Education and references

- MSc Computer Science, FESB Split | 2014 - 2016. Master thesis at Universidad de Las Palmas de Gran Canaria; Teaching Assistant for Distributed Information Systems.
- BSc Computer Science, FESB Split | 2011 - 2014.
- Applying with NLC recommendation context; additional written references available from Tilt, ReneVerse, Povio, Rimac, Profico, and Ericsson.
