

Hrvoje Pavlinovic

Senior Software Engineer - Backend / Full-stack / AI-assisted delivery

hrvoje@pavlinovic.com | +385 97 629 2514 | <https://hrvoje.pavlinovic.com> | Split, Croatia (EU)

Why NLC / Infinitas is a strong fit

Senior engineer with 13+ years of experience taking ambiguous product and platform problems from idea to production. My strongest recent work is in TypeScript/Node.js backend systems, distributed commerce workflows, PostgreSQL, AWS, GraphQL/Hasura, payments, shipping, and operational tooling. I use modern AI tooling every day, but I am careful about scoped credentials, explicit production actions, and keeping engineering judgment in the loop.

The role reads like a good match because Infinitas needs someone who can learn a complex fund-finance domain, make progress with limited supervision, and communicate trade-offs clearly. I have done similar domain-heavy work in healthcare/clinical trials, vehicle telemetry and OTA systems, ad engagement data, and live commerce/logistics.

Relevant strengths

- Independent delivery: clarify scope, find the real constraint, design the system, implement, test, debug, release, and communicate clearly.
- AI-fluent workflow: modern AI tooling, repo-specific agent guidance, connected operational context, safe credential boundaries, and CI feedback loops used to move faster without outsourcing judgment to the tool.
- Complex domain experience: live commerce, auctions, payments, shipping/logistics, healthcare/clinical trials, ad engagement data, search, real-time systems, and automotive telemetry.
- Stack adaptability: deep recent production work in TypeScript, Node.js, NestJS, Express, GraphQL, Hasura, PostgreSQL, Redis, AWS CDK/ECS/Lambda/SNS/SQS, React, Next.js, SvelteKit, and Deno/Fresh.

Professional experience

Senior Backend Engineer | Tilt | 2025 - Present

- Build and operate backend systems for Tilt's live commerce platform across livestreaming, auctions, product inventory, payments, shipping, seller tooling, and real-time buyer workflows.
- Ship changes inside a large TypeScript backend monorepo with 50+ services and shared libraries, spanning NestJS, Express, Hasura, PostgreSQL, Redis, AWS ECS/Lambda, SNS/SQS, S3, and AppConfig.
- Delivered complex commerce integrations and operational fixes across Stripe, Shippo, Royal Mail, InPost, Hasura schema exposure, auction events, live rooms, product ingestion, and mobile seller workflows.
- Used modern AI tooling and connected operational context across Linear, Slack, Sentry, Stripe, Shippo, and AWS workflows to accelerate implementation, debugging, and release work while keeping credentials scoped and production actions explicit.
- Introduced and improved AI-assisted engineering workflows, including repo-specific agent guidance, ticket-to-implementation experiments, CI feedback loops, and safer handoff patterns for a fast-moving distributed team.
- Recognized internally as a reliable engineer who moves quickly, collaborates well across product and engineering, and handles ambiguous backend problems with strong ownership.

Technologies: Node.js, TypeScript, NestJS, Express, Hasura, GraphQL, PostgreSQL, Redis, AWS, CDK, ECS, Lambda, SNS/SQS, Video Streaming, Stripe, Shippo, Sentry, Modern AI Tooling, System Architecture

Senior Backend Engineer | ReneVerse.io | 2023 - 2025

- Architected backend services for an in-game advertising and gaming assets platform used by mobile game integrations.
- Scaled ad engagement and targeting systems to handle 1.7B+ monthly impressions at peak traffic with real-time reporting needs.
- Led integrations for Unity and Unreal Engine SDKs, translating partner requirements into reliable backend APIs and data flows.
- Built AWS CDK infrastructure, GraphQL APIs, background processing, and operational tooling for a small startup engineering team.
- Mentored developers, improved delivery practices, and consolidated legacy repositories into a more maintainable monorepo.

Technologies: Node.js, TypeScript, GraphQL, AWS CDK, ECS, Docker, PostgreSQL, Serverless, Monorepo

Software Engineer (Consulting) | CryptoToday | 2024 - 2025

- Built backend and infrastructure for a crypto discovery product, covering real-time market data ingestion, ranking, and Telegram mini-app support.
- Optimized database access for price scraping from 20+ exchanges with indexing, caching, and query improvements.
- Implemented voting and community mechanisms while keeping non-technical stakeholders aligned on trade-offs and delivery scope.
- Integrated a mobile backend for Telegram mini-app workflows used by a high-traffic consumer audience.

Technologies: Next.js, MongoDB, PostgreSQL, TonConnect, AWS CDK, ECS

Software Engineer | Povia | 2021 - 2023

- Develop clinical trials management system for German healthcare company Clariness
- Implement scalable backend architecture using AWS, Terraform, Docker, and GitLab CI/CD pipelines
- Integrate Twilio API for direct call agent functionality and resolve critical timezone calculation bugs

- Simplify HIPAA compliance requirements for healthcare team, ensuring successful regulatory approval
- Optimize database performance for handling thousands of concurrent patient record queries

Technologies: Node.js, NestJS, TypeORM, PostgreSQL, AWS, Terraform, Docker

Backend Engineer | Rimac Automobili | 2020 - 2021

- Contribute to Telemetry API and OTA updates system for world's fastest electric hypercar
- Implement microservices architecture using TypeScript, GraphQL, and event-driven design with Kafka
- Design scalability solutions handling real-time telemetry data from 100+ vehicle sensors
- Conduct 15+ technical interviews and establish hiring standards for the team
- Create secure OTA updates system with rollback capabilities, ensuring zero failed deployments

Technologies: TypeScript, GraphQL, Apollo Federation, Kafka, PostgreSQL, AWS

Senior Software Engineer | Profico | 2018 - 2020

- Lead development standards meetings with C-level executives, establishing company-wide coding practices
- Architect scalable web applications for Norwegian media company handling 1M+ monthly users
- Implement legacy system integration connecting 4 real estate agency APIs into unified platform
- Mentor 3 junior developers achieving promotion to mid-level positions within 12 months
- Reduce system downtime by 80% through performance optimization and proactive monitoring

Technologies: Node.js, TypeScript, Express, React, PostgreSQL, Redis, Docker

Software Engineer | Ericsson | 2015 - 2018

- Develop internal tools: Nodebook (Symfony), Atlas (data analysis), AAT (testing)
- Improve performance by migrating from Groovy & Grails to Node.js
- Create framework-agnostic schema language for testing tools and present to SoftBank executives

Technologies: Node.js, Symfony, PHP, Python, MySQL

Student Software Developer | Freelance | Apr 2013 - July 2016

- Tracked 3000+ hours on various projects while attending university
- Worked with Joomla, WordPress, Magento, custom PHP + jQuery
- Managed ad campaigns, SEO optimization, and server maintenance
- Balanced work and studies, graduating with multiple job offers

Technologies: PHP, Symfony, jQuery, Joomla, WordPress, Magento, MySQL, Linux, SEO, Google Analytics, Google Ads, Facebook Ads

Selected projects

Memoato | <https://memoato.com>

AI-powered personal memory and life tracking platform with natural-language capture, automated categorization, searchable history, and insight dashboards.

Technologies: Wasp, Postgres, Redis, AI, Stripe

PLAYGRND | <https://playgrnd.app>

Amateur football league and tournament platform with player profiles, standings, match results, and community-first local sports workflows.

Technologies: Go, Postgres, Redis, SvelteKit, Hetzner

PLAYGRND Draft | <https://draft.playgrnd.app>

Fast football draft game where users spin iconic national-team tournament squads, build a World XI, simulate a tournament, and share the result.

Technologies: Next.js, TypeScript, Postgres, Hetzner

Personal Website | <https://hrvoje.pavlinovic.com>

Personal publishing and project hub with blog posts, lightweight traffic stats, Memoato profile integration, public project notes, and self-hosted Fresh/Deno delivery.

Technologies: Deno, Fresh, KV, Analytics, Memoato

HILLS Lab | <https://hills-lab.hr>

Independent engineering studio for backend systems, applied AI workflows, infrastructure experiments, and small product bets.

Technologies: Backend, Infra, AI, Product

Education

Master's Degree, Computer Science | FESB - Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture | 2014 - 2016

- Master's thesis @ Universidad de Las Palmas de Gran Canaria (Erasmus scholarship)

- Student Teaching Assistant for Introduction to Distributed Information Systems

Bachelor's Degree, Computer Science | FESB - Faculty of Electrical Engineering, Mechanical Engineering and Naval Architecture | 2011 - 2014

References

Ivica Vidovic - Ericsson Nikola Tesla

Senior Software Engineering Manager, Head of UDM Operations at Ericsson Nikola Tesla; currently board member at Abysalto

"Hrvoje stood out early in his career because he was always eager to learn, challenge the status quo, and take on responsibilities beyond his role. His curiosity, initiative, and drive to improve things made it clear that he had the potential to grow into a strong engineering leader."

LinkedIn: <https://www.linkedin.com/in/ivica-vidovic/>

Company: <https://ericsson.com>

Ante Matijaca - Profico

Co-founder of Profico

"During his time at Profico, Hrvoje proved to be someone we could truly rely on. He was not afraid to take responsibility, step outside his comfort zone, and push new initiatives that helped move things forward."

LinkedIn: <https://www.linkedin.com/in/antematijaca/>

Company: <https://profi.co>

Denis Grahovac - Rimac Automobili

Engineering Manager at Rimac then; now Director of Software Engineering at Toming

"Hrvoje was a reliable and hard-working engineer who adapted well to the demanding and fast-moving environment at Rimac. What stood out was not only his ability to get things done, but also how easygoing and collaborative he was with the people around him."

LinkedIn: <https://www.linkedin.com/in/denis-grahovac/>

Company: <https://rimac-automobili.com>

Goran Mladenovic - Povio

Head of Freelance at Povio

"Hrvoje is a pleasure to work with, open, professional, and transparent in his communication, and someone who reliably delivered on every agreed scope."

LinkedIn: <https://www.linkedin.com/in/goran-mladenovic/>

Company: <https://povio.com>

Vladan Petrovic - ReneVerse

CTO at ReneVerse; currently Software Architect at Incode

"Hrvoje is a top-tier software engineer who makes a next-level impact. At ReneVerse, he was key to developing our core Web2 and Web3 services, most notably architecting a sophisticated ad engagement data system on AWS that powered our real-time targeting. His mastery of serverless, GraphQL, and blockchain integration is matched by his excellent problem-solving and communication skills. He is also a proactive collaborator and a natural mentor who elevates the entire team. Any team would be lucky to have him."
